South River Technologies Releases GroupDrive Version 6

New Release Facilitates

Annapolis, MD – November 17, 2009 - South River Technologies announced that it has released version 6.0 of its GroupDrive Document Collaboration Suite. GroupDrive is a complete solution that enables users to collaborate on documents from within the applications that they use every day. The new version includes FIPS 140-2 certified SSL engine for secure transfers that comply with government standards.

Version 6.0 also includes client support for Windows 7 and a new Macintosh Client. Users can connect to personal and shared workspaces through the convenience of a Windows drive letter or a mounted device on the Macintosh. This enables users to collaborate through an instantly familiar interface.

“We are seeing an increased demand for a variety of client platforms that need to seamlessly collaborate,” says Michael Ryan, CEO and Co-Founder of South River Technologies.

“GroupDrive’s enhanced security, along with the variety of user interfaces meets the needs a broader end-user base, particularly for our educational customers.”

About South River Technologies

South River Technologies is an innovator in managed file transfer and document collaboration software. The Company’s software allows users to access, manage and share files over the Internet in order to automate and streamline business processes and enhance productivity. SRT’s products enhance customers’ existing applications by instantly enabling secure access and collaboration within those applications. More than 70,000 customers in over 114 countries use SRT’s software to make remote file access and collaboration more efficient for their customers, partners, and distributed workforce.
