

**FOR IMMEDIATE RELEASE**

**South River Technologies Announces FIPS 140-2 Certification and 64-Bit Support for DMZedge Server**

**ANNAPOLIS, MD—March 10, 2009**—South River Technologies (SRT), an innovator in secure file transfer and document collaboration software, today announced a significant upgrade to its *DMZedge* Server with the release of version 3.0. *DMZedge* Server protects business networks from security breaches such as network intrusion, hacking and other attacks.

Compliance with FIPS, the Federal Information Processing Standards developed by the National Institute of Standards and Technology for U.S. government computer systems is a critical requirement for government customers. FIPS is designed to help ensure the security of information stored in disparate systems. SRT has a substantial base of customers at all levels of government, and compliance with FIPS will enable increased adoption by federal agencies. *DMZedge* Server, when used in conjunction with SRT's Managed File Transfer Solution, Titan MFT, achieves this important level of compliance.

“Today there’s a mandate from businesses, government agencies and universities about securing confidential information,” said Michael Ryan, co-founder and CEO of South River Technologies. “*DMZedge* achieves multiple layers of security, enabling both encrypted transfer of the data and protection of the internal network”.

The release also adds support for 64-bit versions of Windows, the emerging standard for server operating systems. The 64-bit edition of *DMZedge* Server runs as a native 64-bit application on Windows Servers. 64-bit *DMZedge* Server, combined with the 64-bit processing power of Windows Server, provides a powerful, scalable and secure solution for high-volume enterprise implementations.

**About South River Technologies**

South River Technologies is an innovator in Managed File Transfer and document collaboration software. The Company’s software allows users to securely access, manage and share files over the Internet in order to automate and streamline business processes and enhance productivity. SRT’s products enhance customers’ existing applications by instantly enabling secure access and Internet file sharing within those applications. More than 65,000 customers in 114 countries use SRT’s software to make remote file access and collaboration more efficient for their customers, partners and distributed workforce.
